R ference AC has the following relevant portions:

Title: Method for protecting the quality of service of connections between sections of a packet-oriented network having a resource manager

Abstract: The method uses a resource manager which processes information relating to the address regions of the sections of the packet-oriented network, the possible connection routes, and the available transmission resources between the sections. On initialization of a connection the required transmission resources and the source and destination addresses are signaled to the resource manager. The resource manager then determines the route through the network and decides, based on the requested resources and the available resources, whether the connection is to be admitted.

At page 2, lines 41-45: It is mentioned that the resource manager stores an abstract topology model, by means of which the transmission resources between the sections are controlled and the quality of service is guaranteed. However, there is no mention of a change to information induced by a topology change.
